### Education

Degree/Certificate	Institute/Board	GPA/Percentage	Year
B.Tech, Electronics and Communication Engineering	NIT, Patna	8.1 / 10.0	2022-2026
Senior Secondary	CBSE	93.2%	2020-2022
Secondary	ICSE	90.2%	2010 - 2020

#### Achievements

Stanford AI Lab	Interviewed at Prof. Jiajun Wu's Lab for research position in computer vision	2025
NK Securities Research	Ranked $67^{\rm th}/2095$ in IV Prediction; MSE = 1.3e-5	2025
M <sub>2</sub> L Summer School	Selected from 1600+ global applicants (BTech to Industry); Split, Croatia	2025
Amazon ML Challenge	Ranked $184^{\text{th}}/75,000+$ ; F1 score = $0.4667$ using fine-tuned moondream	2024
IIT ISM AI of GOD	Winner; WER = $0.116$ using TrOCR + T <sub>5</sub> ; post-processing algorithm	2024
RMO	Top <b>0.4</b> % nationwide mathematical olympiad(classes 8–12) in <b>India</b> , out of 250k students	2019
Findings		

Knowledge is not localized circuits; it can be better understood as a network path of gated circuits Application: MATS g.o (Neel Nanda)

#### Research

Knowledge Graph-Informed Query Decomposition(KG-IQD): Hybrid KG-RAG Reasoning in Noisy Contexts

\* Authors: Aditya Raj, Dr. Kuldeep Kurte\* | Poster (ISWC 2025) - Rejected

# Experience

### Founding AI Research Engineer

India

• QFI Research Capital

May 2025 - Present

- Lead a team of 2 engineers to build **data pipelines** and **forecasting models** predicting **product timelines** and assessing **market impact**, integrated with a **real-time sentiment engine** for long-term **alpha capture**.
- Resolved critical computation bugs, built and deployed an internal toolkit to manage workflow.

Research Intern

Hyderabad, India

IIIT-H | Dr. Kuldeep Kurte, Spatial Informatics Lab

Apr 2025 - July 2025

- Achieved state-of-the-art results on a custom disaster QA benchmark, outperforming RQ-RAG by 14% and KG by 18%, by developing a neuro-symbolic framework that guides query decomposition using Knowledge Graphs and interrelates points with RAG on sub-queries for robust reasoning over structured and unstructured data.

## **Projects**

## Optimizing and Quantizing FBNet Models for Edge Deployment

docs | October 2025

- Tools: Hugging Face, PyTorch, Edge Device
  - Converted FBNet-A/B from PyTorch → TensorFlow → TFLite (FP32, FP16, INT8) for edge deployment, achieving MSE 1e-19, 100% accuracy, and up to 4× model size reduction.
  - Rebuilt architectures in **Keras+TF**, used a **parser** for weight transfer, and verified using **MSE** and accuracy metrics.
  - Implemented TFLite GPU batch resizing, improving conversion stability and edge-device performance.
- Investigating Conditional Knowledge Circuits in LLMs TinyLlama 1.1B

docs | Aug 2025 - Sept 2025

Tools: Hugging Face, PyTorch, DPO/RLHF, Red Teaming

- Demonstrated that **LLMs retain competing facts**, retrievable via **trigger-activated gates** without erasing knowledge.
- Showed that if one circuit is removed, others can reactivate knowledge through hidden triggers.
- Hypothesized that **jailbreaking** will always succeed, and gave empirical examples for it(by jailbreaking Gemini 2.5 pro with 3-4 tokens).

# Efficient LLMs via Switchable and Dynamic Quantization

October 2025 - Current

Tools: PyTorch, Hugging Face, LoRA, QAT-LLM, SQuAD Dataset

- Integrated switchable and dynamic quantization into GPT-2, enabling per-layer bit-width control (INT8-FP32) and adaptive LoRA activation.
- Trained on SQuAD using cyclic precision training and joint bit-width optimization, achieving stable accuracy across
  dynamic precision configurations and demonstrating robust quantized inference.
- (In-Progress)Evaluating the **robustness** under random precision switching, aligning insights with **CPT** (**ICLR'21**) and **Double-Win Quant** (**ICML'21**).

### Technical Skills

Languages Python, C++, SQL, BASH, TypeScript, MATLAB, Triton (basic)

ML/Stats PyTorch, Hugging Face (Transformers, PEFT), TensorFlow, JAX (basic), scikit-learn, NumPy

Time Series Gaussian processes, signal smoothing

AI Alignment RLHF, DPO, PPO, Instruction-Tuning, Constitutional AI, Supervised Fine-Tuning (SFT)

DevOps & Tooling Docker, Git, GitHub Actions, CI/CD, monitoring, Linux (WSL/Ubuntu), W & B Model Interop Logit Lensing, TransformerLens, CircuitsVis, SAE, Activation Patching, etc.
